

## **SERVICE ALARM SYSTEM FOR A BOAT PROPULSION UNIT**

### **Abstract of the Disclosure**

A service alarm system for a boat propulsion unit monitors a lubricant service life. The system informs the watercraft operator when the lubricant is no longer suitable to provide proper lubricating properties for the boat propulsion unit. The alarm system informs the operator by sounding an audible alarm or illuminating a visual alarm through at least one light. By informing the operator inadequate lubrication properties, the user can perform proper service of the watercraft to ensure safe and enjoyable watercraft operation.
